

Rohaan Ashraf

Backend Developer

rohaanashraf2001@gmail.com | +92 329 7280829 | linkedin.com/in/rohaanmughal | github.com/rohaan1829

PERSONAL STATEMENT

Backend Developer who designs, builds, and ships scalable backend services and REST APIs. Strong with NestJS, Node.js, Express, and TypeScript on the backend, with Python for AI/data work and PostgreSQL/MongoDB for data. Comfortable across the stack with React and Next.js when needed, and uses AI coding tools daily with judgment: plan, prompt, review, test, then ship.

EDUCATION

FAST National University of Computer & Emerging Sciences

BS in Computer Science

Sep 2021 – Dec 2025

Faisalabad, Pakistan

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java

Backend & APIs: NestJS, Node.js, Express.js, Python, REST APIs, Authentication, Webhooks, MVC

Databases: PostgreSQL, MongoDB, MySQL, Firebase

Frontend: React, Next.js, React Native, HTML5/CSS3

Tools & Practices: Git, GitHub Actions, Postman, CI/CD, Agile/Scrum, Claude (Claude Code), GPT Integration

EXPERIENCE

Associate Software Engineer, Infinitiv.AI

Nov 2025 – Present

- Designed and shipped backend services and REST APIs across 3+ production web apps in an Agile team.
- Integrated third-party APIs and real-time data processing into backend services, writing clean, modular Node.js and TypeScript code.
- Contributed to peer code reviews and CI/CD releases; used AI coding tools daily to ship faster while reviewing and testing all output.

Full Stack Developer, CorexTech

Jun 2025 – Nov 2025

- Built backend integrations and reusable modules for an email-marketing automation platform serving cross-platform clients.
- Implemented REST API integrations following MVC principles to improve maintainability across the backend.
- Led client requirement-gathering sessions and translated business needs into shipped backend features.

PROJECTS

FirstAidTag firstaidtag.ca

React Native, Python, NFC, AI

- Built an AI-powered medical-health band: a Python backend that powers health tracking, syncs phone-collected data, and writes updates back to a physical NFC tag.
- Designed the data model and API endpoints connecting the React Native client, AI services, and the NFC wearable.

SleuthQuest sleuthquest.com

Next.js, TypeScript, Node.js, PostgreSQL

- Designed and shipped the backend for a full-stack interactive mystery platform: a Node.js/TypeScript API over PostgreSQL handling quest creation, user state, and game progression.
- Built data models, REST endpoints, and authentication flows powering a customizable quest builder and a multi-device player experience.

HelperHive: On-Demand Services Platform (Capstone)

Full-Stack, REST APIs, Real-Time, NLP

- Built the backend for an on-demand services marketplace (capstone): real-time booking and chat, role-based authentication, scalable REST APIs, and NLP sentiment analysis on the chat service.
