Practices: Agile (Scrum), Responsive Design, UI/UX in Figma, CI/CD pipelines

Work Experience

Associate Software Engineer - Infinitiv.AI

November 2025 – Present

Delivered 3+ full-stack applications with real-world use cases. Collaborating within an Agile team to design, develop, and deploy high-performance features using modern web technologies. Contributing to the development of scalable AI-driven applications, focusing on backend integrations and real-time data processing

Full Stack Developer – CorexTech

June 2025 – November 2025

Developed features for an email marketing platform using React Native and backend integrations. Collaborated in Agile team to design and deliver scalable modules. Led client meetings to gather requirements and translate them into technical solutions.

Projects

- **HelperHive - On-Demand Maid Services App (Capstone Project)**
 - Built a full-stack on-demand service platform with real-time booking and chat functionality.
 - Implemented role-based authentication and dashboards using Firebase.
 - Integrated NLP for sentiment analysis and intelligent chat features.
 - Designed scalable backend structure for handling concurrent users.
- **FBR-Compliant CRM & Invoicing System**
 - Automated tax calculation and invoice generation aligned with FBR regulations.
 - Implemented dashboard analytics for revenue tracking and reporting.
 - Optimized database queries for handling large transaction datasets.
- **SmartFormGen – Automated Form Email Drafter**
 - Built a browser-based automation tool to parse and extract web form data, enabling intelligent auto-filling using custom GPT-based prompts
 - Improved user efficiency by reducing manual form entry time through automation workflows.

Interests

- Tech Blogging, AI Integration in Apps, building apps to solve random everyday problems, Podcasts.
